Downtown crossing opposed

by Annette Taylor Times Business Writer

There's no doubt in Bobby Parker's mind that the life expectancy of a Knik Arm bridge crossing Downtown would be only two years.

In his 40 years at sea, "I never saw a bridge that a ship couldn't knock down," Parker testified Wednesday night at a public hearing on the environmental effects of building a bridge across Knik Arm to link Anchorage and Point MacKenzie.

Glenn Highway.

The joint hearing before the

state Department of Transporta-

tion and Public Facilities and the

Anchorage Planning and Zoning Commission was held at the Egan Civic & Convention Center. Most of the opposition

Wednesday night was not to the bridge itself but to the Downtown

The two routing options under route because of navigational consideration are a Downtown access at Third Avenue and L and I streets or an Elmendorf Air Force Base access to the commercial and recreational vessels, a third of those testifying Arch.

If a fuel tanker struck the bridge while trying to maneuver through ice to the Anchorage port and caught fire, Parker said, "Well, all you could do is get some weenies.'

And if ships couldn't get into the port because of an accident See Public, page A-12

Public airs concerns, doubts about

at the bridge, "you people in Anchorage would run out of toilet paper in a week," Sea-Land Capt. James Waters testified.

The two seamen were among the 35 people who testified and 350 people who came to listen to presentations by consultants who prepared the environmental impact statement on the Knik Arm

The Anchorage Port Commission, Port of Anchorage and the U.S. Coast Guard went on record as opposing a Downtown access route and, besides what Waters

and Parker said, noted that a An Elmendorf crossing would bridge would cause even more heavy ice buildup than already exists during the winter months.

Officials of Sea-Land and Totem Ocean Trailer Express, the two largest shippers serving the state, previously have voiced their opposition to a bridge Downtown.

A Downtown bridge would be a suspension bridge about three miles long, connecting land across the inlet to an interchange system leading to both L Street and Gambell Street. Estimated cost is \$743 million

A Downtown crossing would mean a 15-minute drive from the nearest suburb across Knik Arm.

mean a 30-minute drive.

A bridge at Elmendorf would be a double-deck truss bridge spanning 21/2 miles to north of Green Lake on the base and then to the Glenn Highway by way of a new interchange near Muldoon Road. Estimated cost is \$547 mil-

The route would swerve around many base facilities but would force relocation of two major communications antennas, which the Air Force estimates would cost \$89 million.

One alternative to building the bridge is to do nothing else to improve traffic flow, consultants said. But that alternative takes

Assembly OKs council

PALMER — The Matanuska-Susitna Assembly Tuesday approved a new community council covering the central Palmer-Wasilla Highway area. Under boundaries approved, the South Lakes Community Council covers an area from Seward Meridian Road to just west of Trunk Road, from the shores of Finger, Cottonwood and Mud lakes to the Parks Highway. The new council - initiated by residents of several subdivisions and homeowners' associations - will be the fifth community council in the borough. Residentsin the Butte and Big Lake areas are also talking about forming community councils, according to borough officials. The recognized advisory councils receive and comment on municipal issues. Interest in forming councils has been rising lately, said Borough Manager Gary Thurlow. "It's very timely because there are so many land use

issues coming to the fore at this time," he

Knik crossing hearings set

WASILLA - Two public hearings on the final environmental report analyzing the Knik Arm Crossing have been set in the Matanuska-Susitna Borough. The first is 7:30 p.m. today at Wasilla High School. The second will be 7:30 p.m. Tuesday at Houston City Hall. State planners are expected to give a brief presentation on the study and then open the meetings to public comment. The state is considering two crossing sites: a \$747 million bridge at downtown Anchorage and a \$547 bridge at Elmendorf Air Force Base. Once across the water, both routes would lead to Houston. Written comments on the study can be submitted through Oct. 22.

now under way, to widen the Glenn Highway to six lanes to Eagle River and from there widening the road to four lanes to the Parks Highway. No cost esti-

mates were available. Another alternative calls for widening the Glenn Highway to six lanes all the way to the Parks Highway and widening that road to four lanes to Wasilla. The estimated cost is \$57 million.

A third alternative is buying three Hovercrafts to ferry people and vehicles between Point MacKenzie and Anchorage. The estimated cost is \$227 million.

more reasonable place to start. Stuart Hall said other major cit- goon?" ies, including San Francisco, didn't build their famous bridges until after ferry operations could

into account the state's plans, of crossing was needed to open up land for development, which possibly would reduce land prices in Anchorage. Milburn Tucker, a Point MacKenzie dairy farmer speaking for most dairy operators in that area, also noted that a bridge was critical in keep-

ing a lid on product prices. But several of those testifying also were worried about increasing carbon monoxide levels and displacing traffic congestion to

other areas of town. "What does a 20-percent increase on the I-L street couplet really mean?" Sandra Wicks said. "What does that mean in The Hovercraft option drew the number of lanes we might some support Wednesday as a have to add or what it will do to the greenbelt at Westchester La-

Foremost in the minds of many attending the hearing Wednesday was how much a no longer handle all of the traffic. Knik Arm bridge would cost and Most testified that some kind where would the money come

A few people warned that politicians may be pushing the Knik Arm crossing project simply because money burns holes in their pockets. If they think they have the money — whether it be state or federal — "they want to spend it." Wicks said.

How the state would finance a bridge is under study.

The Planning and Zoning Commission will meet again at 7:30 p.m. Oct. 17 at 4600 DeBarr

The Resource Development Council's Knik Army study team has scheduled 26 meetings in the next three weeks also to look at the economic feasibility of the bridge and possible impacts.

The team's draft report will be presented to the council's executive committee Oct. 17. The final report will be released to the public Oct. 22.

Spanning Knik Arm

Department of Transporta- crossing would be of retion and Public Facilities has the job of planning a bridge across Knik Arm to connect from other parts of the state Anchorage and the Mata-

nuska Valley. feasibility studies, done extensive work on environmental impact, considered alternative locations for the Anchorage end of the bridge of the arm.

Some design work also has been done, and drawings are available for all to see.

That's fine and dandy. But some turbulent days are ahead.

OBJECTORS WILL shoot day night. The detractors focused on the problems a bridge could cause to shipbegan in Downtown Anchordown by a boat within the first two years.

There's more to the down side. Cost estimates are in the neighborhood of \$550 million and the source of those megabucks has not been pinpointed. It's up to the legislature to agree on how to finance the crossing.

It would be possible to dig into the state treasury and pay for the bridge with cash, but that could put other capital projects on the back

A TEAM from the state burner. Because a Knik gional, rather than statewide, benefit, legislators might not look too kindly on shorting their own consti-It has put together lengthy tuents in favor of an expensive Southcentral bridge.

The legislature has given the state the authority to finance and operate public toll facilities, which could inand has even taken some clude the bridge. But even core samples from the bed the biggest dreamers concede it is unlikely that the amount of traffic using it in the first few years would bring in sufficient revenue.

> CONCEDING these obstacles, there are reasons to hope the bridge will be built.

Thousands of jobs would at the project from all direc- be created during the contions, as was the case at the struction. The link would republic hearing here Wednes- lieve some of the traffic congestion on existing highways to the valley.

Anchorage is growing by ping at the Anchorage port 1,000 new residents a month and predicted if the span and it will soon run out of room. The land across the age it would be knocked arm is the most likely prospect for expansion. Use of that land for homes and businesses would increase the tax base of the valley.

A crossing that would link Anchorage and MacKenzie Point has been talked about for more than a quarter of a century and the legislature has flirted with funding it for years. The work of the enthusiastic team from DOT would indicate the state is finally taking the project seriously

Valley residents fear bridge may sacrifice welfare

Wasilla - The proposed Knik Arm crossing took a battering Thursday from a majority of speakers at a public hearing into possible impact at "the other end" of the multi-million-dollar span

That's "this end" for the people of the Matanuska-Susitna Borough. And with few exceptions Thursday they expressed fears that their welfare was in danger of being sacrificed for the convenience of Anchorage commuters.

Those commuters, they say, would cost existing Mat-Su taxpayers out-of-pocket cash in additional taxes, while providing little overall benefit to the 34,000 people already living in the borough.

Other speakers at the hearing called for upgrading of the existing Parks-Glenn highways commuter routes to be upgraded before any new crossing is estab-

But the essence of the objections came from Wasilla lawyer Noel Kopperud, who called on Mat-Su residents to "consider your own identity," rather than, as he put it, "providing an evening residence for Anchorage."

Kopperud pointed to frequent references in pro-crossing arguments to easing the problems of overcrowding and high property costs in the Anchorage Bowl.

He suggested the state government

on the list — for alleviating dangerous and inconvenient existing traffic problems in the Valley

Kopperud said the military could be approached to relocate from some of their thousands of acres in suburban Anchorage, thus freeing land for immediate growth in the area.

About 100 people atended the hearing here, and fewer than a dozen spoke. One was David Ring, a landowner at Point MacKenzie and frequent public supporter of the crossing.

Ring said there was an estimated \$1 billion in gravel which could be extracted and sold from Point MacKenzie to help

should set priorities — with a crossing low offset the estimated \$500 million to \$700 million cost of the crossing.

Ring objected to charges that he and other private speculators would be the sole beneficiaries of the span. He said only 10 percent of the 65,000 acres in Point MacKenzie was in private hands, and the rest of the land, if sold, would pump up government coffers.

But Mike Bromson countered that his estimates showed the owner of a typical \$100,000 home now in this area would pay up to \$177 per year in additional taxes to provide services to new residents who would locate in the borough if a bridge were built.

marine officials by rapped downtown location

dorf air space.

A floating bridge, Birkeland said, needn't be as high as a suspension bridge and so would not encroach on the airspace. It would also provide greater stability during an earthquake, he said.

He urged the Department of Transportation to consider a floating bridge option and add it to their final impact statement.

Contacted after the meeting, Jerry Hamel, project manager for DOT, said Berkland's plan would receive consideration.

'It may have merit,'' Hamel said, indicating that the idea would be studied and a full response would be included in the final impact statement.

"Both crossings, I think, are infeasible," Keller said. "I was confident that they would sink under their own infeasibility, until 1979 (when North Slope oil revenues started rolling in). Then all of a sudden they became feasible, because feasibility was determined by the availability of funds, not necessarily whether the project makes sense or not."

Losse Lord."

Another said he was c cerned that "when the le of political shouting incress, the chances of making fore terrible public political also increases."

Others in the crow ought the potential benefit, a bridge would more than weigh the costs.

Fat Davis said he was discinted with all the new talk. Anchorage in the proportion of the costs.

The increased taxes would be needed to make up an estimated "shortfall" of up to \$9 million a year in Mat-Su Borough reve-

Consultants acknowledge that local government here struggled to provide services for new commuters, who would bring homes and families — but no jobs — to the area.

In the past, borough officials have estimated it costs about \$1,500 in local taxes to educate one child in Mat-Su schools, and ment. a typical family has more than one school-aged child.

under current mill rates, leading as well as residential population to an existing shortfall which crossing critics say would worsen with the added popula-

Bromson asked for an independent study of that impact before plans for the Knik crossing are pursued. He said he did not shortfall would occur, as the want the Mat-Su Borough government to conduct the study, as the borough had a "vested interest" in the crossing.

Robert Johnson said he favored the crossing because he now pays \$159 per month in borough taxes, and "gets nothing" in return from the Mat-Su govern-

Mat-Su officials are on record as favoring some form of Knik That typical family pays less Arm route, which they say will than \$1,000 in property taxes stimulate industrial development

growth.

But borough officials, too, have expressed concern in the past over the apparent emphasis on benefits to Anchorage from the proposed span.

Some say they have perceived an almost colonial attitude by Anchorage factions promoting the crossing, without, they say, any consideration for the local government and population already in place here.

Palmer businessman Ben Wattum said the state should be working on a plan now to ease dangerous congestion on the Parks and Glenn highways for the thousands of commuters now traveling between Anchorage and Valley points.

"If you don't," he said, "some of you in this room are going to

Palmer-area farmer Jay Dearborn said if the so-called "no-crossing option" were pursued by upgrading the existing highway system, some consideration should be given to improving major highway intersections to speed traffic and increase safety factors in commuting.

And Pierre Strong said the crossing would not cut off any distance for commuters except for those traveling to Houston, the proposed northern terminus of the crossing off-ramp. Planners have acknowledged

that commuting time from Wasilla to Anchorage would be about the same with a new crossing, or on the existing highway routes.
